

PDF.js

PDF.js or **pdf.js** is a JavaScript library that renders Portable Document Format (PDF) files using the web standards-compliance HTML5 Canvas. The project is led by the Mozilla Foundation after Andreas Gal launched it (initially as an experiment) in 2011.

PDF.js can work as a part of a website or of a browser. Originally created as a Firefox extension,^[3] it is now included in Mozilla Firefox since 2012 (version 15)^{[4][5]} and is enabled by default since 2013 (version 19).^{[6][7]} It is also included in ownCloud^[8], Nextcloud^{[9][10]}, and as a browser extension for Google Chrome, Chromium,^[11] Firefox for Android,^[12] Pale Moon^[13] and SeaMonkey.^[14]
